

Anderson Shelter

Last week you researched all about Anderson Shelters, what they were used for and what you would need in them.

We are aiming to build our own small scale Anderson shelter next week so this week I would like you to test some different materials that you could potentially construct your Anderson shelter out of.

Below are some pictures of small scale Anderson shelters to give you an idea.

There's two sheets to use to support you which you may want to print or copy out. The first is to recap your knowledge of material properties - read the words and match the definitions below. Then think carefully about which materials have the most appropriate properties for your shelter.

The next task is for you think about what other people have used and why it may have worked well or not so well. It is similar to the product analysis that you did for you cushions. Think, why might the person have used corrugated card over regular etc
